

TSplus Advanced Security

7 features to protect your servers from cyber-attacks

- **Homeland Protection** -Prevents foreign attackers from opening remote sessions.
- **Brute-Force Defender**: Blacklist suspicious failed login attempts.
- **Working Hours Restriction**: Control days and time user allow access to server
- **One Click to Secure Desktop**: Simple remote access group policy control
- **End-Point Device Protection**: Restrict access by device name.
- **Ransomware Protection**: Protection stops Ransomware in its tracks.
- **Permissions**: Easily inspect Users and Groups Permissions on folders and files

TSplus Advanced Security Exists In Two Editions

TSplus Advanced Security offers 2 types of protections: – **TSplus Security Essentials** and **TSplus Ultimate Protection**. Whether you are a small startup or an established global enterprise, TSplus Advanced Security can be scaled to your needs – and your budget.

TSplus Advanced Security Essential

- **TSplus Security Essentials** is the essential security package that focuses on keeping remote connections in a safe place for all users with three fundamental protective measures. It is the efficient “turn-key” security solution that every RDS Administrator needs.
- **Homeland Protection**: Prevents foreign attackers from opening remote sessions.
- **Brute-Force Defender**: Blacklist suspicious or troublesome IP addresses and limit failed login attempts.
- **Working Hours Restriction**: Control the days and times that users can access the remote servers accesses.

TSplus Advanced Security Ultimate

- **TSplus Ultimate Protection** is based on the Essentials Edition: it provides two additional protective features intending to lock down RDS Servers and protect them against any breach that could lead an organization to a failure. Each of these measures can be applied differently per user and per group. It is the essential shield for securing large environments, running on Servers with multiple connections.
- - **One Click to Secure Desktop**: Simple remote access group policy control.
 - **End-Point Device Protection**: Restrict access by device name.
 - **Ransomware Protection**: Ransomware is quickly becoming one of the most common forms of cyber-threats. TSplus Advanced Security *Ransomware Protection* stops Ransomware in its tracks.
